

Here they are—
the high-output transformers
you've been asking for!

Lionel Transformers

PS PowerStation™-PowerHouse™ set

New! Announcing the return of the traditional high-output transformer to the Lionel line! Count on the PowerStation-PowerHouse power and control system for all your big-power needs. Plug PowerHouse into PowerStation to give your railroad the energy it deserves—135 watts and 8 amps of alternating current. Perfect for that first "big" transformer or as a brawny replacement for aging or underpowered transformers. Classic, retro styling looks perfect in any Lionel setting. Turn the Circle-L throttle to increase track power—as power increases, the backlit powerband-sweep display progressively illuminates! Backlit LIONEL display shows power-on status at all times; light extinguishes to indicate short circuits. Contoured control buttons. Whistle/horn and bell buttons activate all classic Lionel sound effects, all Lionel Railsounds systems, and other popular sound units. Direction button temporarily cuts track power to sequence all Lionel and Lionel-compatible reverse units. Includes variable (track) and fixed (accessory, continuous 14 volts) outputs. The set includes one PowerStation controller and one PowerHouse power supply. (6-12938) \$199.95

PG PowerGrid™-PowerHouse™ set

New! The one-stop solution for all your non-train railroad powering needs! Connect PowerHouse to PowerGrid, and you're ready to energize animated accessories, remote-control switches, lighting, and more. PowerGrid has four fixed-voltage binding-post outputs, each rated at a different continuous voltage: 10, 12, 14, and 16 volts alternating current. PowerHouse's high output (135 watts, 8 amps) means you can connect accessory circuits to each output and still have power to spare. It's that simple—just install PowerGrid and you'll never worry about accessory power again! Don't burden your track-power transformers with accessory feeds—use the brawny PowerGrid-PowerHouse set for all your accessory, lighting, and switch-powering duties. Backlit LIONEL display shows power-on status at all times; the light extinguishes to indicate short circuits. The set includes one PowerGrid power distributor and one Powerhouse power supply. (6-12939) \$149.95
